EWEM

Class Test

Q.1] Compare E-waste data of India with 5 other nations in this paper and reflect upon these.

Q.2] Give 5 methods which can be implemented in India to reduce E-waste.

Q.1]

Ans: 1. India Vs China
- China generates much more e-waste, but India has the highest growth rate. China also recycles much more formally.

2. India Vs USA:
- The USA generates more e-waste than India and has a much better formal recycling system.

3. India Vs Germany
- Germany generates less e-waste but recycles over half of it, unlike India.

4. India Vs Japan
- Japan produces less e-waste and has a far more efficient recycling system than India.

5. India Vs Brazil
- India generates more e-waste and has a faster growth rate, while both countries face recycling challenges.

PAGE No.
DATE / /

Reflection:

- India is one of the fastest-growing e-waste generators.
- Its formal recycling rate is very low compared to developed countries.
- India needs stronger recycling infrastructure, stricter policy implementation, and greater public awareness for sustainable e-waste management.

Q.2]

Ans: 1. Strengthen Formal Collection and Recycling Systems.

- Establish more authorized e-waste collection centers and improve formal recycling facilities to reduce dependence on the informal sector.

2. Enforce strict e-waste laws

- Improve implementation of e-waste regulations.

3. Promote reuse and repair

- Encourage repairing and reusing electronics.

4. Increase public awareness

- Educate people on proper e-waste disposal.

5. Producer take-back programs

- Manufactures should collect old electronic products.
